commercialisation of agricultural products derived through modern technology to address the issues of international trading in seeds, information requirements and environmental safety. All these stages take time, but are essential to ensure confidence from the eventual consumers and for the longer term development of rapeseed.

The 1995 Congress in Cambridge, United Kingdom, will provide a forum to discuss these and all the other issues of common interest. The breadth of the programme demonstrates the extensive range of interests involved.

- international policies and markets
- breeding and biotechnology
- agronomy and physiology
- animal/human nutrition and chemistry
- plant protection
- industrial developments.

These issues will be covered in both theatre and poster presentations, and within a crowded programme we have attempted to create space and time for discussion.

The 1995 Congress provides an opportunity to meet old friends, to make new friends and to exchange views on all aspects of rapeseed. Cambridge itself provides further attractions and diversions, and we look forward to meeting you in July.

John MacLEOD
President GCIRC
National Institute of Agricultural Botany, Cambridge, UK.
