

COMPARISON OF DOUBLE-LOW RAPESEED MEAL TO SOYBEAN MEAL IN
FEEDING EXPERIMENTS ON BROILER CHICKENS

1. AIM OF THE STUDIES

A series of experiments was conducted to prove the replacement of soybean meal (SBM) by double-low rapeseed meal (RSM) in isocaloric and isonitrogenous diets for broiler chicks. This work was done within the bilateral scientific-technical co-operative work GDR-- Poland.

2. EXPERIMENTAL PROCEDURE

	<u>Experiment 1</u>	<u>Experiment 2</u>
Strain of chicks	Tetra 82	Tetra 82
Sex	♂	♂ and ♀
Keeping	floor pens ₂ 16 birds/m ² under practical conditions	single wire bottom cages under scientific-ex- perimental conditions
Feeding	ad libitum	ad libitum
Weighings	at fortnight intervals	at fortnight inter- vals
Statistical calculation	variance analysis	variance analysis
Experimental period	1.-42. day of life	1.-49. day of life

3. EXPERIMENTAL DIETS

Table 1

COMPOSITION OF THE EXPERIMENTAL DIETS (EXPERIMENT 1) AND ANALYZED NUTRIENT CONTENT (Percentage)

	Group 1 Control	Group 2 RSM Canola	Group 3 RSM "Jantar"
Maize	23,5	28,0	28,0
Wheat	24,0	35,0	35,0
Barley	20,0	-	-
Soybean meal	18,5	10,0	10,0
Fish meal	2,0	2,0	2,0
Yeast (feed grade)	7,5	7,5	7,5
Maize germ oil	1,0	2,0	2,0
Minerals	2,5	2,5	2,5
Vitamins	1,0	1,0	1,0
RSM Canola	-	12,0	-
Polish RSM "Jantar"	-	-	12,0
DL-methionine	0,07	-	-
Crude protein	19,8	19,6	20,5
Crude fat	3,9	4,8	5,4
Crude fibre	6,4	5,5	6,1
Lysine ¹⁾	1,1	1,1	1,1
Methionine + Cystine ¹⁾	0,78	0,78	0,79
EFh/kg ²⁾¹⁾	565	567	564

5. CONCLUSIONS

- Partial replacement of soybean meal up to 10 % by 12-15 % of double-low rapeseed meal (RSM) had no adverse effect on chick growth performance in well balanced diets.
- Obvious differences - observed after application of 15 % double-low RSM.- are not significant.
- Consequently, the new quality varieties allow remarkable RSM portions in starter and finisher diets for broiler chicks.
