

AMINO ACID COMPOSITION IN RAPESEED

Bengt Uppström and Maj Johansson

Research & Development, Svalöf AB

S-268 00 Svalöv, Sweden

The amino acid composition of varieties and lines of summer and winter forms of Brassica napus and Brassica campestris has been determined by a new HPLC technique. The found variation of the results of this investigation with special emphasis on the limiting amino acids lysine and methionine will be presented and discussed.
