Transformation in the bioeconomy – the changes we'll see, the opportunities we'll create

Jim Lane¹

¹ The Daily Digest, Miami, USA

Bold Goals drive bold applications, and bold applications are driving the demand for rapeseed. What are those policies, where are they being implemented, by whom and where, when are they in effect, how much do they help? And, those bold applications, what are they and where are they driving demand, and how much, how soon? In this overview, we'll look at innovative companies driving the shift to de-fossilized supply-chains, creating both drop-in substitutes for established products, new high-performance materials that can be made only with renewables, and the traits and characteristics for rapeseed that will be in the highest demand as climate change increases and so does the global response. This will be an up-to-the-minute overview taken right from the headlines and continuing stories covered by the world's most-widely-read bioeconomy daily.
